

Success story

**More efficiency
by digitalization.**

Digitalization of 5 audit types
at Continental corporation

As one of the world's leading automotive suppliers, Continental develops and produces a wide range of automotive products and technologies. These include the innovative driving assistance systems from the "Advanced Driver Assistance Systems" business unit. In order to guarantee the highest possible quality and efficiency throughout the entire product development process, the corporation decided to use mQuest®Audit.

The goal is to create uniform audit processes throughout the entire corporation. The digitalization platform covers a wide range of possibilities. This includes preparatory audits such as 5S audits, accompanying audits according to VDA 6.3 and final product audits. Due to the module-based software architecture, the system could be customized and put into operation within a few months.

Deployed product: mQuest® Audit

Digitalization of 5 audit types (5S, ESD, LPA, product audits, VDA 6.3) with one solution

Designed as a global standard for digitalized audits of the Continental corporation

Customization of the standard software to individual customer requirements

Integration into the corporate evaluation tool via mQuest®Audit BI Connector

Time and cost savings by replacing paper and Excel-driven processes

Services

Customizing of the software

Training of employees

Digitization of 5 audit types

mQuest®Audit BI Connector

Looking for a central and flexible audit tool, the mQuest®Audit software was heavily convincing. The switch from analog recordings to a digital solution increases the efficiency and quality of our audit processes tremendously.

Michael Schafbauer, Quality Manager Operations
BU Advanced Driver Assistance Systems (ADAS)
Autonomous Mobility and Safety (AMS)
