

Success story

Home sweet home.

Clever digitized from the initial inspection to the final approval

Builders throughout Germany trust in the prefabricated house supplier STREIF from Weinsheim since 1929. In order to digitize construction related processes efficiently and reliably, STREIF trusts on a combination of the low-code platform Intrexx and a branded version of the mQuest® application for mobile data collection. From the initial inspection to final approval, all tasks and information on the con-

struction process are documented across every craft. With the use of mQuest®, fillable PDFs are replaced by digital checklists and forms. As a result, master data such as addresses, plans, or even samples from Intrexx can be integrated into the mobile application. The elimination of media discontinuities and manual post-processing makes the solution a secure investment in a digitized future.

Deployed product: mQuest® for Intrexx

Replacing fillable PDFs through mobile forms and checklists on smartphones and tablets

Seamless integration of the mobile solution into the Intrexx portal

Digital transformation of the entire process from initial inspection to final approval

Integration of master data from Intrexx into digital forms

Time and cost savings by replacing manual processes

Services

Branding of the software

Automated distribution of PDF reports

Digitization of the checklists and forms

Integration into the Intrexx portal

We immediately noticed the added value of a fully digitized process. Manual work is reduced to a minimum through the automatic addition of master data and the increased data consistency. The intuitive handling and offline capability also ensured a high level of acceptance among our employees and service providers.

Georg Fell, IT Manager, STREIF Haus GmbH
